

## Create a Personal Page

- 1) Sketch three layouts for your page: mobile, tablet, and PC

Create a page about yourself. It should include:

- A header
- A navigation bar
- A footer
- At least one additional section

Specifics

Header: What information traditionally goes into a header? Make sure to include it.

Navigation: Include links to at least two other pages. These other two pages do not need to be completed, but give them descriptive names. Make sure clicking on the links doesn't go to a 404 error. Stay on the same page.

Footer: What information traditionally goes into a footer section? Make sure to include it.

Additional section: I want to know something about you when I am done reading it.

- 2) Code the mobile version.

- 3) Additional requirements:

- Include at least three images somewhere in your page
- Make sure the site is validated through w3 and the wave validator.
- Upload it to a server.

## DELIVERABLES

- 1) Hand in a hardcopy of your sketches - keep a copy for yourself.
- 2) Place your URL in the comments section of the CTools Assignment
